## UTI Detect Testing Results: **Positive**

### Result Summary

#### Pathogens Detected:

- > Providencia stuartii
- > Staphylococcus saprophyticus
- > Ureaplasma parvum
- > Acinetobacter baumannii
- > Proteus mirabilis
- > Ureaplasma urealyticum
- > Staphylococcus aureus
- > Klebsiella oxytoca
- > Enterococcus faecium
- > Enterobacter cloacae
- > Escherichia coli
- > Treponema pallidum
- > Enterococcus faecalis
- > Aerococcus urinae
- > Proteus vulgaris
- > Serratia marcescens
- > \*Candida auris
- > \*Candida tropicalis
- > Pseudomonas aeruginosa
- > Klebsiella aerogenes
- > Klebsiella pneumoniae
- > \*Candida krusei
- > Corynebacterium urealyticum
- > Citrobacter freundii
- > \*Candida glabrata
- > Morganella morganii
- > Streptococcus agalactiae
- > \*Candida albicans

### Suggested Treatment

#### Drug of Choice:

#### Alternative drugs/combination:

\*Candida sp can be associated with normal flora, therefore, may not usually require treatment. Candida albicans is typically susceptible to Fluconazole, Amphotericin B or Flucosine.

> \*Candida parapsilosis

### **Antibiotic Resistance Genes Detected:**

- > Methicillin
- > Carbapenem
- > Carbapenem
- > Penicillin & B-lactam
- > Penicillin & B-lactam
- > Vancomycin
- > Trimethoprim / Sulfamethoxazole
- > Trimethoprim / Sulfamethoxazole
- > Carbapenem
- > Quinolone
- > Vancomycin
- > Carbapenem

The information presented in this report is provided as general educational health information. The content is not intended to be a substitute for professional medical advice, diagnosis, or treatment. Only a physician, pharmacist or other healthcare professional should advise a patient on the use of the medications prescribed.

The recommendation of drugs is solely based on laboratory results of identified pathogen and associated antibiotic resistance genes detected and interpreted here by LDS Rx software provided by Medical Database, Inc ([www.medicaldatabase.com](http://www.medicaldatabase.com)). The software has not been evaluated by the Food and Drug Administration. The software, and the report generated by the software, is validated to interpretate results from the tested pathogens and antibiotic resistance genes by the lab. The findings are then translated on most common drugs linked to reported antibiotic resistance genes (detected) or not resistance (not detected) reflecting to drug class and list of drugs giving an education recommendation.

The infectious disease pathogen and antibiotic resistance report is one of multiple pieces of information that clinicians should consider in guiding their therapeutic choice for each patient. It remains the responsibility of the health-care provider to determine the best course of treatment for a patient. Adherence to dose guidelines does not necessarily assure a successful medical outcome.
